

Consolidated Defects

BUG-01: Status-tab selection corrupts dashboard summary counts

Severity: High

Area: Admin Dashboard

Selecting Verified Members or Pending changes the totals shown for All Applications and Verified Members to the selected tab's count, even though the underlying records still exist. Summary counts must remain independent of the active list filter.

BUG-02: Rejected member is removed without appearing in Rejected

Severity: High

Area: Admin - Member Status

After rejecting a verified member, the Verified Members count decreases, but the Rejected count and Rejected list do not update. The record effectively disappears from the status lists.

BUG-03: Pending exports contain approved members

Severity: High

Area: Exports

The Pending list shows zero applications, but its PDF and Excel downloads include all approved members. Exports must preserve the active Pending filter.

BUG-04: Sorting removes the selected status filter

Severity: High

Area: Admin Filtering

Sorting the Pending list by Wing causes approved members to appear. Sorting must rearrange only the records in the currently filtered list.

BUG-05: Member details are accessible without authentication

Severity: High

Area: Security - Authorization

A registration-success/member-detail link exposes the member's name, login email, institution, payment status and approval status without requiring login. The page requires an authorization check.

BUG-06: Public error page exposes debug information

Severity: High

Area: Security - Configuration

Opening an invalid URL displays internal route information and indicates DEBUG = True. Production must return a standard, non-verbose 404 page.

BUG-07: Session and CSRF cookies lack the Secure flag

Severity: High

Area: Security - Session

Authentication-related cookies are not marked Secure. They should be configured as HTTPS-only cookies in production.

BUG-08: Active session times out after approximately 2-3 minutes

Severity: Medium

Area: Authentication

During normal use, selecting an option can unexpectedly redirect the user to the login page after only a few minutes of activity.

BUG-09: Login does not return the user to the requested page

Severity: Medium

Area: Authentication

Opening a member-detail link while logged out and then signing in redirects to the main dashboard instead of the originally requested member page.

BUG-10: Payment-verification proof does not load

Severity: Medium

Area: Member Details

Selecting the payment proof from a member's details opens another page or tab, but the uploaded image or its content is not displayed.

BUG-11: Applicant and institution name fields accept invalid numeric-only input

Severity: Medium

Area: Registration Validation

The Name and Institution Name fields allow numeric-only values. They should require meaningful name text while still permitting legitimate punctuation such as spaces, apostrophes, hyphens and periods.

BUG-12: Mobile Number field accepts more than 10 digits

Severity: Medium

Area: Registration Validation

The mobile input should stop accepting characters after the tenth digit and validate the completed value as exactly 10 digits.

BUG-13: Birth-date field accepts future dates

Severity: Medium

Area: Registration Validation

The Date of Birth field accepts a future date such as 01-01-2099 without an immediate validation error. Future dates must be blocked.

BUG-14: Password fields have no show/hide control

Severity: Low

Area: Authentication / Registration

The login password field and the registration Create Account Password and Confirm Password fields provide no visibility toggle, making it difficult for users to verify their entries.

BUG-15: Special characters break search state

Severity: Medium

Area: Search / URL Handling

Search terms containing &, + or # change when the user sorts or exports results, which can return incorrect records. Query values must be encoded and preserved.

BUG-16: Empty search displays an invalid record range

Severity: Low

Area: Empty Results

When no records match, the interface displays 'Counting Numbers 1 to 0' instead of a clear 'No records found' state.

BUG-17: Unauthorized-access error is styled as success

Severity: Low

Area: Error Feedback

The 'Unauthorized access' message appears in green with a check mark. Access blocking works, but the message must use error styling and an appropriate icon.

BUG-18: Downloaded Word document has incorrect alignment

Severity: Medium

Area: Document Export

Applicant information in the downloaded Word file is improperly positioned and inconsistently aligned, reducing readability and document quality.

BUG-19: Login modal does not manage keyboard focus

Severity: Medium

Area: Login Accessibility

Pressing Tab moves focus behind the login popup, and Escape does not close it. Focus should remain trapped within the modal until it is closed.

BUG-20: Filter dropdowns lack accessible labels

Severity: Medium

Area: Admin Accessibility

Screen-reader users cannot reliably identify which dropdown controls Wing, District, application status or payment status. Each control needs a programmatically associated label.

BUG-21: Validation errors are not associated with their fields

Severity: Medium

Area: Form Accessibility

Invalid fields and their specific error messages are not properly connected programmatically, so assistive technologies may not announce the correct error.

BUG-22: Dashboard embeds excessive full-size image data

Severity: Low

Area: Performance

The five-member dashboard transfers about 803 KB of uncompressed HTML, largely due to embedded member photos. Optimized thumbnails and normal image resources should be used.
